For Whom It May Concern

I recommend Blue Energy Diesel Dual Fuel conversion systems. Those systems works very good, are able to achieve big savings and what is very important are universal and easy to calibrate. Advanced system can be installed in any diesel engine, from the olderst contructions up to new trucks. We converted 4 trucks so far: Mercedes Actros 1831, MAN, Mercedes Atego and Mercedes Sprinter 311. Customers are very happy. Achieved fuel ratio is about 60% of CNG and 40% of diesel.

Also converted Chevrolet Captiva 3.2 V6 using Blue Energy Advanced 6cyl OBD system (CNG). Performance is very good and there is a positive difference between previous Italian system installed in this car.
